- xii) Income Tax expense comprises of current tax and deferred tax charge or credit. Provision for current tax is made with reference to taxable income computed for the financial year for which the financial statements are prepared by applying the tax rates as applicable.

Minimum Alternate Tax (MAT) paid in a year is charged to the Statement of Profit and Loss as current tax. The company recognizes MAT credit available as an asset only to the extent there is convincing evidence that the company will pay normal income tax during the specified period, i.e., the period for which MAT Credit is allowed to be carried forward. In the year in which the Company recognizes MAT Credit as an asset in accordance with the Guidance Note on Accounting for Credit Available in respect of Minimum Alternate Tax under the Income Tax Act, 1961, the said asset is created by way of credit to the statement of Profit and Loss and shown as "MAT Credit Entitlement." The Company reviews the "MAT Credit Entitlement" asset at each reporting date and writes down the asset to the extent the company does not have convincing evidence that it will pay normal tax during the sufficient period.

Deferred income tax charge reflects the impact of current period timing differences between taxable income and accounting income. The deferred tax charge or credit is recognized using prevailing

enacted or substantively enacted tax rates. Where there is an unabsorbed depreciation or carry forward loss, deferred tax assets are recognized only if there is virtual certainty of realization of such assets. Other deferred tax assets are recognized only to the extent there is reasonable certainty of realization in future. Deferred tax assets/liabilities are reviewed as at each balance sheet date based on developments during the period and available case laws, to reassess realizations/liabilities.

xiii) Research and Development

In accordance with Accounting Standard (AS) – 26, revenue expenditure on Research & Development is charged to the Profit & Loss Account in the year in which it is incurred. Capital expenditure on research and development is shown as an addition to fixed assets and depreciated accordingly.

xiv) Earnings Per Share

Basic Earnings per share is computed by dividing the net profit after tax by the weighted average number of equity shares outstanding during the period. For the purpose of calculating Diluted earnings per share, the net profit for the period attributable to equity shareholders and the weighted average number of shares outstanding during the period are adjusted for the effects of all dilutive potential equity shares.

xv) Contingent Liabilities, Contingent Assets & Provisions
